花了一点时间,在MAC上实现了用Navicat连接Docker中的Mysql,使用了最新的Mysql8.0版本。

1. 下载Mysql的Docker镜像:

```
1 $ docker search mysql (搜索mysql镜像)
2 $ docker pull mysql (下载mysql镜像,默认最新版本)
```

首先MAC上要安装Docker(免费版官方下载地址: Docker免费版),下载安装并运行Docker。然后打开MAC终端,按以下步骤进行:

2. 运行镜像,设置root账号初始密码(123456),映射本地宿主机端口3306到Docker端口3306。测试过程没有挂载本地数据盘:

```
$ docker run -it --rm --name test_mysql -e MYSQL_ROOT_PASSWORD=123456 -p 3306:3306 -d mysql
```

3. 查看已运行的容器:

```
1 $ docker ps -a
2 CONTAINER ID IMAGE COMMAND CREATED STATUS POF
3 a42f31094df5 mysql "docker-entrypoint.s..." 7 seconds ago Up 6 seconds 0.6
```

4. 进入test_mysql容器:

```
1 docker exec -it test_mysql bash
2 root@a42f31094df5:/#
```

5. 在容器内登陆Mysql:

```
root@a42f31094df5:/# mysql -uroot -p123456
mysql: [Warning] Using a password on the command line interface can be insecure.
Welcome to the MySQL monitor. Commands end with; or \g.
Your MySQL connection id is 9
Server version: 8.0.11 MySQL Community Server - GPL

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.
```

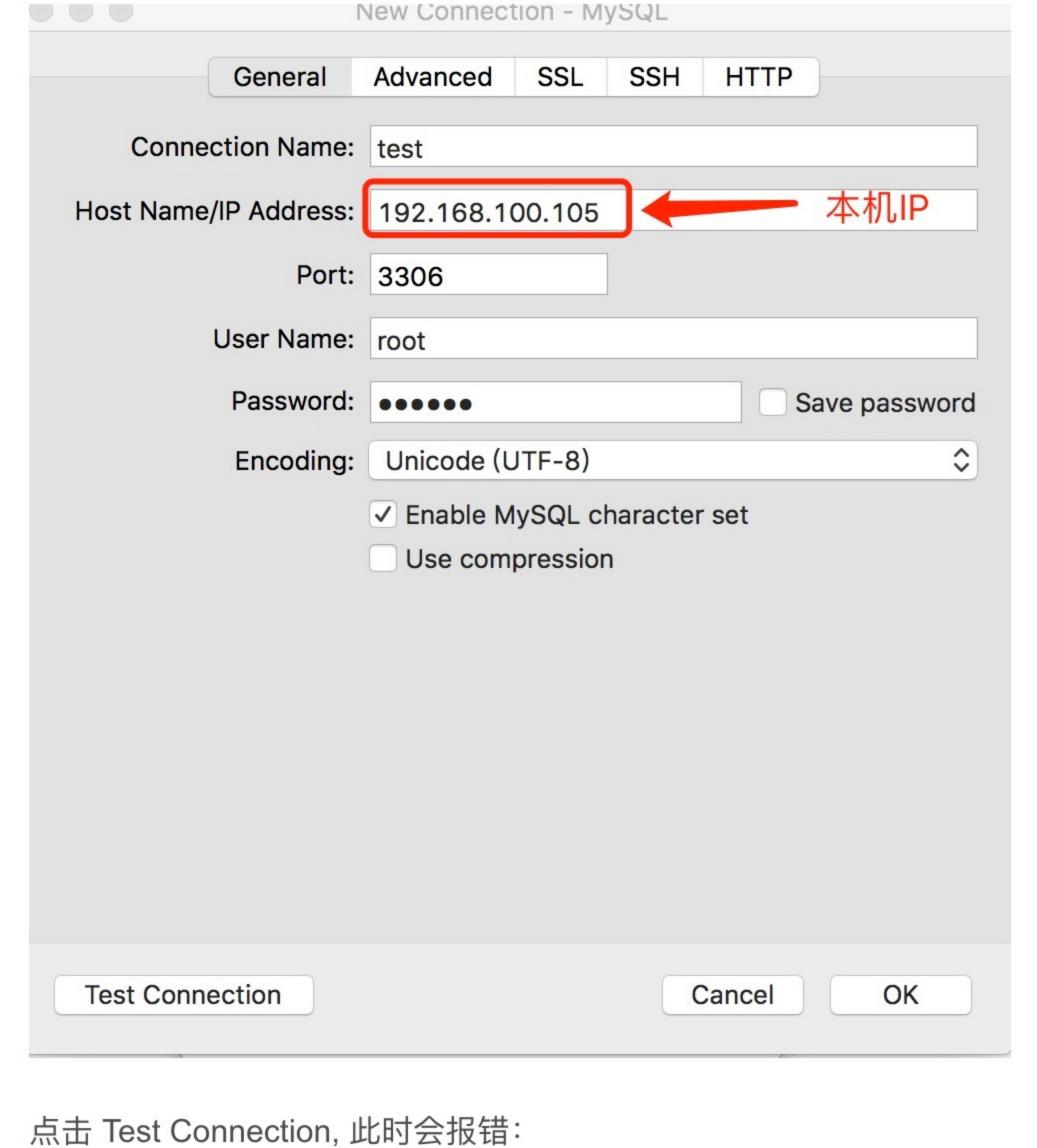

6. 查看root等用户信息

15 mysql>

7. 为root分配权限,以便可以远程连接:

```
mysql> grant all PRIVILEGES on *.* to root@'%' WITH GRANT OPTION;
Query OK, 0 rows affected (0.01 sec)
```

8. 使用Navicatlian连接Mysql:

Client does not suppo

Connection Failed

Client does not support authentication protocol requested by server; consider upgrading MySQL client

OK

1 mysql> ALTER user 'root'@'%' IDENTIFIED BY '123456' PASSWORD EXPIRE NEVER;

这是因为Mysql5.6以上的版本修改了Password算法,这里需要更新密码算法,操作步骤如下:

```
Query OK, 0 rows affected (0.09 sec)

mysql>
mysql> ALTER user 'root'@'%' IDENTIFIED WITH mysql_native_password BY '123456';
Query OK, 0 rows affected (0.01 sec)
mysql>
mysql> FLUSH PRIVILEGES;
Query OK, 0 rows affected (0.01 sec)

mysql>
mysql>
mysql>
mysql>
mysql>
```
